To the hiring team,

Professional quality goblin here, ready and waiting for the right role to showcase my abilities!

As an experienced Test Lead and Test Engineer with a proven track record in managing both manual and automated testing processes, I am eager to bring my skills to your team. With my solid foundation in software testing and a proven track record in leading complex projects, I am confident in my ability to contribute positively and impactfully with you.

As a seasoned test professional, I have successfully led and executed various testing initiatives, including a recent critical core banking project. In this role, I assumed responsibility for data migration and integration testing, ultimately transitioning back to a Test Lead position to oversee the project's final delivery.

I excel in crafting tailored testing solutions, particularly in highly regulated environments. My experience in working with multiple vendors and project teams, coupled with my strong analytical skills, enables me to effectively manage complex testing scenarios and ensure the highest quality standards. I am the glue that holds the team together through rain, hail and shine.

I am proficient in both manual and automated testing, with a deep understanding of requirements gathering, analysis, and strategic planning. My passion for user experience drives me to prioritize usability and quality of life in every testing endeavor. After all, what is a computer without a human interface? Skynet, that's what!

Throughout my work I have developed and led highly capable teams, focussing on empowering team members to reach their potential. My ability to conceptualise and distil team goals into action has led to highly effective and efficient teams with clear goals and methodology, as well as some character development worthy of a Dungeons and Dragons campaign.

Currently, I am actively involved in a hybrid role, balancing automation and manual testing tasks. I played a pivotal role in developing a robust automation framework, leveraging CI/CD pipelines and GitHub Actions to optimize testing efficiency that I am now working in to create fully automated testing and regression packs for a highly customised challenger bank working entirely in cloud and microservice architectures.

I am eager to discuss my qualifications further and explore how my skills and experience align with your team's goals. Please feel free to contact me via email or phone to address any questions or discuss additional capabilities.

Sincerely,

Dan Johansen
